

Commercial building codes are navigating toward zero energy performance requirements as part of the Pan-Canadian Framework on Clean Growth and Climate Change. [Today](#) building occupants expect increased levels of thermal comfort and energy efficiency which, can only be achieved with a high-performance building enclosure. When these buildings are detailed right, during the design phase of construction, they are both durable and cost-effective to build.

Morrison Hershfield, Owens Corning and Northern Facades have teamed up for a **three session virtual event to help position your projects on the path to net zero energy performance.**
